

LEAVE-BEHIND

Built for trust. Hosted where you decide.

Where the system lives, who can get in, and what happens when something goes wrong — designed with you, not bolted on later.

Hosting you own

Indian data centres for residency, your cloud account, or on-prem. You keep the hosting account.

Defence in depth

TLS everywhere, encryption at rest, hashed passwords, patched dependencies, restricted production access.

Role-based access

Shop floor, accounts, and directors see different systems. Permissions set with you — not left on defaults.

Audit trail

Meaningful changes logged with user and timestamp. Wrong numbers get settled in a minute.

Backups that restore

Daily automated backups, retention agreed up front, restore drills so backups are not rumours.

Insider risk

Export rights are a permission. Bulk exports can be flagged. Soft-delete recovers mistakes and exits.

CERTIFICATIONS & FRAMEWORKS

ISO 9001 certified

ISO/IEC 27001 certified

GDPR & DPDP by design

HIPAA-ready when scoped

Ask for current certificates and statements of applicability for your procurement file.
